

## 42 200: AND-OR Module

- **Safety-related**
  - 4 AND functions, 2 OR functions, 1 blocking/inverting function
- The module is TÜV-tested for SIL 4 in accordance with IEC 61508.

Outputs are short-circuit-proof

Figure 1: Block Diagram

All the module functions are monitored by a microcontroller.

If a malfunction occurs, the ERR LED is lit, output d28 is on 1-signal and relay contact z26-d26 opens.

Output z28-b28 is intended for connecting to the communication module, e.g., for transferring data to a distributed control system (DCS).

RDY (Ready) indicates the applied voltage ( $\geq 20$  V).

|                    |                 |
|--------------------|-----------------|
| Fuse               | 0.375 A         |
| Operating data EL+ | 24 VDC / 115 mA |
| Space requirement  | 3 RU, 4 HP      |

## AND element:

- Switching time                      Approx. 1 ms
- Reset time                            Approx. 4 ms

## Blocking element:

- Switching time                      Y7 approx. 15 ms  
     $\bar{Y}7$  approx. 4 ms
- Reset time                            Y7 approx. 3 ms  
     $\bar{Y}7$  approx. 10 ms

## Diodes:

- Reverse voltage                     $\leq 1000$  V
- Reverse current                     $\leq 50$  mA
- Reverse recovery time            typ. 30  $\mu$ s
- Peak value of threshold voltage    3 x 1 V
- Forward nominal current         $\leq 200$  mA

If the direct and the inverted signals in a safety-related controller are further processed, implementation of the blocking/inverting function is mandatory.

It is important that the direct signal after the blocking function is also received at the direct output. The internal circuit structure of the blocking function prevents a 1 signal (or overlapping signal) from being applied to the inverted and the direct output simultaneously.

**1** Correct

**2** Not recommended

## Communication via Modbus

### Reading of Variables

Type BOOL: Function code 1  
 Type WORD: Function code 3  
 Events: Function codes 65, 66, 67

| Relative address | Data type | Value | Description                       | Relative event no. |
|------------------|-----------|-------|-----------------------------------|--------------------|
| 0                | WORD      | 46 H  | Module type 42 200                |                    |
| 1                | BOOL      | 0     | None                              |                    |
| 2                | BOOL      | 1     | Module removed                    |                    |
| 3                | BOOL      | 1     | Communication with module not ok  |                    |
| 4                | BOOL      | 1     | Module in slot, communication ok  |                    |
| 5                | BOOL      | 1     | Operating voltage too low, no RDY |                    |
| 6                | BOOL      | 1     | Module fault, ERR                 |                    |
| 7...8            | BOOL      | 0     | None                              |                    |
| 9                | BOOL      | 1     | 1-signal at input z2              | 0                  |
| 10               | BOOL      | 1     | 1-signal at input d2              | 1                  |
| 11               | BOOL      | 1     | 1-signal at input z4              | 2                  |
| 12               | BOOL      | 1     | 1-signal at input d4              | 3                  |
| 13               | BOOL      | 1     | 1-signal at input z6              | 4                  |

| 22               | BOOL      | 1     | 1-signal at input d14             | 13                 |
| 23               | BOOL      | 1     | 1-signal at input z16             | 14                 |
| 24               | BOOL      | 1     | 1-signal at input d16             | 15                 |
| 25...40          | BOOL      | 0     | None                              |                    |
| 41               | BOOL      | 1     | 1-signal at output z18 Y1         | 24                 |
| 42               | BOOL      | 1     | 1-signal at output d18 Y2         | 25                 |
| 43               | BOOL      | 1     | 1-signal at output z20 Y3         | 26                 |
| 44               | BOOL      | 1     | 1-signal at output d20 Y4         | 27                 |
| 45               | BOOL      | 1     | 1-signal at output z22            | 28                 |
| 46               | BOOL      | 1     | 1-signal at output d22            | 29                 |
| 47               | BOOL      | 1     | 1-signal at output d24 Y7         | 30                 |
| 48               | BOOL      | 1     | 1-signal at output z24 Y7         | 31                 |

Table 1: Module Status via Modbus

Value: 0 always has the opposite meaning  
 H: Hexadecimal value  
 Absolute address:  $A = p \cdot 256 + \text{relative address}$   
 Absolute event no.:  $E = (p - 1) \cdot 32 + \text{relative event no.}$   
 $p$  = Slot no. in the subrack

## Reading of All Variables

Function code 3, 84 WORDS

Starting with address 2000 H, 3000 H or 4000 H

|                  | WORD 0 (16-bit) |               | WORD 1 (16-bit) |        | WORD 2 (16-bit) |         | WORD 3 (16-bit) |         |
|------------------|-----------------|---------------|-----------------|--------|-----------------|---------|-----------------|---------|
| Relative address | 0               | 8...1         | 24...17         | 16...9 | 40...33         | 32...25 |                 | 48...41 |
| Data             | Module type     | Module status | None            | None   | None            | None    | None            | Outputs |

For error-free data transfer, all 84 WORDS must be read. This ensures that the variables of all the modules within a subrack are transferred. 0 is transferred for unused module slots.

## Communication via PROFIBUS DP

## Reading of Variables

Relative addresses of WORD and BYTE type

| WORD | Bit    | BYTE  | Bit   | Value | Description                       |
|------|--------|-------|-------|-------|-----------------------------------|
| 0    | 0...7  | 0     | 0...7 | 46 H  | Module type 42 200                |
|      | 8      | 1     | 0     | 0     | None                              |
